

Keeping your Oracle Cloud Applications documentation up to date during the lifecycle of your ownership, is time consuming and complex. Configurations are constantly changing, and quarterly updates bring with them new innovations and enhancements. Synchronizing these changes across multiple instances (e.g. Dev, Test, Prod) requires a high level of co-ordination and control.

RAPIDLite is a special offering of our Audit Control module. Rapid4Cloud is a SaaS Cloud Automation Suite, providing the on-demand ability to automatically produce configuration reports down to task level, providing real - time visibility and control of your Oracle Cloud environment.

With **RAPIDLite** from Rapid4Cloud, your configuration reports are always up to date and a true reflection of your solution. Decision-making will always be based on accurate data.

KEY FEATURES

-  Produce on demand configuration reports in multiple formats – in a few clicks, in a few minutes
-  Perform impact analysis of Oracle Cloud updates, and any other system changes
-  True SaaS solution – no software to install, no implementation cost
-  Eliminates the need to maintain manual configuration workbooks
-  Self-documenting, providing you with a full set of config documentation

BENEFITS

- ✓ Real-time reporting of Setup in just a few Clicks!!
- ✓ No Programming skills required
- ✓ Easy day to day management and quarterly updates

INTELLIGENT CLOUD AUTOMATION

Designed for both new and existing users of Oracle Cloud Applications, R4C saves time and improves data quality whilst freeing up resources to focus on high value add activities. With Artificial Intelligence and Robotic Process Automation technologies at its core, RAPIDLite is one component of our full suite. R4C is designed to automate and accelerate the many repetitive manual processes necessary when maintaining Oracle Cloud Applications. R4C is key to maximising the benefits of Oracle Fusion.
